

Mohd Mukhtar Ahmad

React Developer - (Frontend Engineer)

📍 Lucknow, Uttar Pradesh
📞 7007560851
✉️ mukhtartheeking1@gmail.com

Summary

Highly motivated frontend developer, with a knack in creating and designing beautiful UI/UX for users and trying to improve each day with different challenges/hurdles and completing tasks with agile development methodology. making mocks come into reality with pin point accuracy is my specialty, other than that I'm a quick learner, adaptable and flexible in any given environment, detailed oriented and a good listener

Work experience

Software Engineer

06/2020 - Present

Shiryam Technologies

Design, UI, UX, mobile responsiveness and maintain whole frontend of every project using Javascript, React.Js, HTML, CSS, SCSS, Material-UI and other frameworks, make reusable components with robust approach, write test cases using React testing library, helping interns with code modularity, contribute in component structures design(schema) for each new project, contribute in making API contracts with the backend team

MERN Stack - Mentor (Intern)

09/2019 - 05/2020

Attain University

Created Projects for students, Conducted daily live sessions to improve their coding skills, Helped students with frontend techniques with latest coding practices, constantly evaluating their monthly tests, assignments and coding challenges

Projects

FHM India

- done

FHM India is the Indian edition of the British monthly men's lifestyle magazine called FHM. It is now published in India by TCG Media Limited.

this project has an admin panel which is more capable than just adding data, we've made it so dynamic that you can even change the whole layout of the website each and every component is dynamically rendered and so as the data on the whole website, you can add user/publisher/admin and give access to them according to the client's need, and later on they can add the data according to their roles.

Technologies Used: HTML, CSS, SCSS, Material-UI, React.js, Redux Saga, Axios, Bugsnag, Google Analytics

i was in charge of it's frontend UI/UX with one other team member, i made it fully mobile responsive also. created an important categories CRUD flow with react DND, added articles dynamic sections with an option to preview the whole article while creating, implemented plagiarism with more than 10 corner case checks, made static pages dynamic, made the footer dynamic, implemented 70% of the API's in whole project and much more.

FHMax:

- done

FHMax is an e-commerce website of an international renowned brand FHM.

this project has an admin panel where you can simply manage the whole e-commerce platform such listing of the products, edit, delete and create coupons/promotions for the website etc.

Technologies Used: HTML, CSS, SCSS, Material-UI, React.js, Redux Saga, Axios, Bugsnag, Google Analytics

i was in charge of it's frontend design with one other team member, i made it fully mobile responsive. created an important save address and cart flow with implementing restful API's using axios and redux saga

TCG Media:

- done

India's Niche Media house, Widely regarded as a leader in the field of media and publishing, TCG MEDIA has been a trusted media partner to global brands. TCG Media also provides clients across varied industries holistic publishing solutions across divergent platforms which includes even custom publishing with an edge.

this project has vast layout of their work and services, which includes magazines and it's subscriptions and much more.

Technologies Used: HTML, CSS, SCSS, Material-UI, React.js, Redux Saga, Axios, Bugsnag, Google Analytics

i was in-charge of the whole frontend, done the whole project alone starting with creating the whole component level structuring to deciding and implementing restful API's and it's contracts, introduced a feature for catching bugs as Bugsnag and completing the frontend for mobile responsiveness as well.

GreenPlas Tech LLP

- done

GreenPlas Tech LLP offers their product with lasting quality the consumer expects from plastics.

Derived from natural resources and designed to help eliminate waste, these bioplastics are a perfect way to meet consumer demands for high quality and ecofriendly products, which can return to nature at the end of useful life

this is a multiple page website which concludes the work they do and has some important features like asking for a particular product queries, and has a career page with applying for a job feature and much more.

Technologies Used: HTML, CSS, SCSS, Material-UI, React.js, Redux Saga, Axios

i did the whole project solo, starting with creating the whole component level structuring to deciding and implementing restful API's and it's contracts, completing the frontend for mobile responsiveness as well.

Salt - (SALT.pe revamp)

- ongoing

Salt provides businesses with a one-stop portal to manage multi-currency accounts, payments, collections, and expenses worldwide.

working partially on it's frontend designs and completing the required mocks which includes different of types charts and statistics components and much more.

Magware - (magzter revamp)

- ongoing

Magzter is a cross-platform, self-service, global digital magazine newsstand with over 8,000 magazines from 3,400+ publishers. Girish Ramdas and Vijayakumar Radhakrishnan founded Magzter in 2011. The Company is headquartered in New York.

been working on this project alone, taking the responsibility of the whole UI/UX of the frontend and as well as admin panel and publisher dashboard and it's core features like adding subscriptions, magazines, issues, coupons with whole crud operations then role based publisher flow and much more.

Nirvana - (trading platform)

- ongoing

A block chain technology company, creating a trading platform

in this project as well i'm working partially, on it's frontend designs with implementing trading charts with socket.io and much more.
