#### 1)FALCON AUTHORIZING

Description : It is the product of Essilor. It is used as a pricing provider of the products by customers. It is used to create products and customers and after that create Plans, Bundle price, Promotions & Profiles, etc. After that we have assigned that promo, price to the products, and these products are assigned to customers, this application also provided one special feature to test pricing before placing the order to compute that right promo and price are assign to products. In short, it provides all API's call, what we need by pricing specification provider applications.

Role: Software Developer

Skills used: Java

#### 2)FALCON ( Pricing Engine )

Description: It is a sub-part of a main system, which is used as Pricing Engine . It is used to create customers , products and assign price list to them, with different types of offers. Each Price list have its price plans. Different Promotions on products can also be added.

Role: Web Developer

Skills used: React
